

Next Gen Sibs PROJECT

An Initiative of the **AUTISM SCIENCE FOUNDATION**
and **THE HILIBRAND FOUNDATION**

FROM ONE GENERATION TO THE NEXT, HOW DOES AUTISM AFFECT YOUR GROWING FAMILY?

NOW ENROLLING:

The **Next Gen Sibs Project** is a multi-site study exploring how autism traits run in families. We know that children with an autistic sibling have a higher likelihood of autism.

Early research suggests the same may be true for children whose parent has an autistic sibling.

If you or your partner have a sibling with autism, your baby could be eligible to receive expert developmental monitoring from leading clinicians and researchers at no cost to you.

INTERESTED?

You may be eligible if:

- You have a baby (12 months or younger) or are currently expecting.
- At least one of your baby's biological aunts or uncles is diagnosed with autism.

This may include written reports and personalized feedback, along with support and resources for your family. Visits may be in person or via telehealth and you will be paid for your time.
